PSYCHOLOGY AND FORM

BY KENNETH BURKE

IT is not, one will recall, until the fourth scene of the first act that Hamlet confronts the ghost of his father. As soon as the situation has been made clear, the audience has been, consciously or unconsciously, waiting for this ghost to appear, while in the fourth scene this moment has been definitely promised. For earlier in the play Hamlet had arranged to come to the platform at night with Horatio to meet the ghost, and it is now night, he is with Horatio and Marcellus, and they are standing on the platform. Hamlet asks Horatio the hour.

"Hor. I think it lacks of twelve.
Mar. No, it is struck.
Hor. Indeed? I heard it not; then it draws near the season Wherein the spirit held his wont to walk."

Promptly hereafter there is a sound off-stage. "A flourish of trumpets, and ordnance shot off within." Hamlet's friends have established the hour as twelve. It is time for the ghost. Sounds off-stage, and of course it is not the ghost. It is, rather, the sound of the king's carousal, for the king "keeps wassail." A tricky, and effective detail. We have been waiting for a ghost, and get, startlingly, a blare of trumpets. And again, once the trumpets are silent, we feel all the more just how desolate are these three men waiting for a ghost, on a bare "platform," feel it by this sudden juxtaposition of an imagined scene of lights and merriment. But the trumpets announcing a carousal have suggested a subject of conversation. In the darkness Hamlet discusses the excessive drinking of his countrymen. He points out that it tends to harm their reputation abroad, since, he argues, this one showy vice makes their virtues "in the general censure take corruption." And for this reason, although he himself is a native of this place, he does not approve of the custom. Indeed, there in the gloom he is talking very intelligently on these matters, and Horatio answers, "Look,
my Lord, it comes.” All this time we had been waiting for a ghost, and it comes at the one moment which was not pointing towards it. This ghost, so assiduously prepared for, is yet a surprise. And now that the ghost has come, we are waiting for something further. Programme: a speech from Hamlet. Hamlet must confront the ghost. Here again Shakespeare can feed well upon the use of contrast for his effects. Hamlet has just been talking in a sober, rather argumentative manner—but now the flood-gates are unloosed:

“Angels and ministers of grace defend us!
Be thou a spirit of health or goblin damn’d,
Bring with thee airs from heaven or blasts from hell . . .”

and the transition from the matter-of-fact to the grandiose, the full-throated and full-vowelled, is a second burst of trumpets, perhaps even more effective than the first, since it is the rich fulfilment of a promise. Yet this satisfaction in turn becomes an allurement, an itch for further developments. At first desiring solely to see Hamlet confront the ghost, we now want Hamlet to learn from the ghost the details—which are, however, with shrewdness and husbandry, reserved for “Scene V.—Another Part of the Platform.”

I have gone into this scene at some length, since it illustrates so perfectly the relationship between psychology and form, and so aptly indicates how the one is to be defined in terms of the other. That is, the psychology here is not the psychology of the hero, but the psychology of the audience. And by that distinction, form would be the psychology of the audience. Or, seen from another angle, form is the creation of an appetite in the mind of the auditor, and the adequate satisfying of that appetite. This satisfaction—so complicated is the human mechanism—at times involves a temporary set of frustrations, but in the end these frustrations prove to be simply a more involved kind of satisfaction, and furthermore serve to make the satisfaction of fulfilment more intense. If, in a work of art, the poet says something, let us say, about a meeting, writes in such a way that we desire to observe that meeting, and then, if he places that meeting before us—that is form. While obviously, that is also the psychology of the audience, since it involves desires and their appeasements.
The seeming breach between form and subject-matter, between technique and psychology, which has taken place in the last century is the result, it seems to me, of scientific criteria being unconsciously introduced into matters of purely aesthetic judgement. The flourishing of science has been so vigorous that we have not yet had time to make a spiritual readjustment adequate to the changes in our resources of material and knowledge. There are disorders of the social system which are caused solely by our undigested wealth (the basic disorder being, perhaps, the phenomenon of overproduction: to remedy this, instead of having all workers employed on half time, we have half working full time and the other half idle, so that whereas overproduction could be the greatest reward of applied science, it has been, up to now, the most menacing condition our modern civilization has had to face). It would be absurd to suppose that such social disorders would not be paralleled by disorders of culture and taste, especially since science is so pronouncedly a spiritual factor. So that we are, owing to the sudden wealth science has thrown upon us, all nouveaux-riche in matters of culture, and most poignantly in that field where lack of native firmness is most readily exposed, in matters of aesthetic judgement.

One of the most striking derangements of taste which science has temporarily thrown upon us involves the understanding of psychology in art. Psychology has become a body of information (which is precisely what psychology in science should be, or must be). And similarly, in art, we tend to look for psychology as the purveying of information. Thus, a contemporary writer has objected to Joyce’s Ulysses on the ground that there are more psychoanalytic data available in Freud. (How much more drastically he might, by the same system, have destroyed Homer’s Odyssey!) To his objection it was answered that one might, similarly, denounce Cézanne’s trees in favour of state forestry bulletins. Yet are not Cézanne’s landscapes themselves tainted with the psychology of information? Has he not, by perception, pointed out how one object lies against another, indicated what takes place between two colours (which is the psychology of science, and is less successful in the medium of art than in that of science, since in art such processes are at best implicit, whereas in science they are so readily made explicit)? Is Cézanne not, to
that extent, a state forestry bulletin, except that he tells what
goes on in the eye instead of on the tree? And do not the true
values of his work lie elsewhere—and precisely in what I dis­t
inguish as the psychology of form?

Thus, the great influx of information has led the artist also to
lay his emphasis on the giving of information—with the result
that art tends more and more to substitute the psychology of the
hero (the subject) for the psychology of the audience. Under
such an attitude, when form is preserved it is preserved as an annex,
a luxury, or, as some feel, a downright affectation. It remains,
though sluggish, like the human appendix, for occasional demands
are still made upon it; but its true vigour is gone, since it is no
longer organically required. Proposition: The hypertrophy of the
psychology of information is accompanied by the corresponding
atrophy of the psychology of form.

In information, the matter is intrinsically interesting. And by
intrinsically interesting I do not necessarily mean intrinsically
valuable, as to witness the intrinsic interest of backyard gossip or
the most casual newspaper items. In art, at least the art of the
great ages (Aeschylus, Shakespeare, Racine) the matter is inter­
esting by means of an extrinsic use, a function. Consider, for
instance, the speech of Mark Anthony, the “Brutus is an honourable
man.” Imagine in the same place a very intelligently developed
thesis on human conduct, with statistics, intelligence tests, defini­
tions; imagine it as the finest thing of the sort ever written, and
as really being at the roots of an understanding of Brutus. Obvi­
ously, the play would simply stop until Anthony had finished. For
in the case of Anthony’s speech, the value lies in the fact that his
words are shaping the future of the audience’s desire, not the desires
of the Roman populace, but the desires of the pit. This is the
psychology of form as distinguished from the psychology of in­
formation.

The distinction is, of course, absolutely true only in its non­
existent extremes. Hamlet’s advice to the players, for instance,
has little of the quality which distinguishes Anthony’s speech. It
is, rather, intrinsically interesting, although one could very easily
prove how the play would benefit by some such delay at this point,
and that anything which made this delay possible without violating
the consistency of the subject would have, in this, its formal justi­
While it would, furthermore, be absurd to rule intrinsic interest out of literature. I wish simply to have it restored to its properly minor position, seen as merely one out of many possible elements of style. Goethe's prose, often poorly imagined, or neutral, in its line-for-line texture, especially in the treatment of romantic episode—perhaps he felt that the romantic episode in itself was enough—is strengthened into a style possessing affirmative virtues by his rich use of aphorism. But this is, after all, but one of many possible facets of appeal. In some places, notably in Wilhelm Meister's Lehrjahre when Wilhelm's friends disclose the documents they have been collecting about his life unbeknown to him, the aphorisms are almost rousing in their efficacy, since they involve the story. But as a rule the appeal of aphorism is intrinsic: that is, it satisfies without being functionally related to the context. Also, to return to the matter of Hamlet, it must be observed that the style in this passage is no mere "information-giving" style; in its alacrity, its development, it really makes this one fragment into a kind of miniature plot.

One reason why music can stand repetition so much more sturdily than correspondingly good prose is because music, of all the arts, is by its nature least suited to the psychology of information, and has remained closer to the psychology of form. Here form cannot atrophy. Every dissonant chord cries for its solution, and whether the musician resolves or refuses to resolve this dissonance into the chord which the body cries for, he is dealing in human appetites. Correspondingly good prose, however, more prone to the temptations of pure information, cannot so much bear repetition since the aesthetic value of information is lost once that information is imparted. If one returns to such a work again it is purely because, in the chaos of modern life, he has been caused to forget it. With a desire, on the other hand, its recovery is as agreeable as its discovery. One can memorize the dialogue between Hamlet and Guildenstern, where Hamlet gives Guildenstern the pipe to play

1 Similarly, the epigram of Racine is "pure art," because it usually serves to formulate or clarify some situation within the play itself. In Goethe the epigram is most often of independent validity, as in Die Wahlverwandtschaften, where the ideas of Ottlie's diary are obviously carried over boldly from the author's notebook. In Shakespeare we have the union of extrinsic and intrinsic epigram, the epigram growing out of its context and yet valuable independent of its context.
on. For, once the speech is known, its repetition adds a new element to compensate for the loss of novelty. We cannot take a recurrent pleasure in the new (in information) but we can in the natural (in form). Already, at the moment when Hamlet is holding out the pipe to Guildenstern and asking him to play upon it, we “gloat over” Hamlet’s triumphal descent upon Guildenstern, when, after Guildenstern has, under increasing embarrassment, protested three times that he cannot play the instrument, Hamlet launches the retort for which all this was preparation:

“Why, look you now, how unworthy a thing you make of me. You would play upon me, you would seem to know my stops; you would pluck out the heart of my mystery; you would sound me from my lowest note to the top of my compass; and there is much music, excellent voice, in this little organ, yet cannot you make it speak. ‘Sblood, do you think I am easier to be played on than a pipe? Call me what instrument you will, though you can fret me, you cannot play upon me.”

In the opening lines we hear the promise of the close, and thus feel the emotional curve even more keenly than at first reading. Whereas in most modern art this element is underemphasized. It gives us the gossip of a plot, a plot which too often has for its value the mere fact that we do not know its outcome.

Music, then, fitted less than any other art for imparting information, deals minutely in frustrations and fulfilments of desire, and for that reason more often gives us those curves of emotion.

1 One might indicate still further appropriateness here. As Hamlet finishes his speech, Polonius enters, and Hamlet turns to him, “God bless you, sir!” Thus, the plot is continued (for Polonius is always the promise of action) and a full stop is avoided: the embarrassment laid upon Rosencrantz and Guildenstern is not laid upon the audience.

2 Yet modern music has gone far in the attempt to renounce this aspect of itself. Its dissonances become static, demanding no particular resolution. And whereas an unfinished modulation by a classic musician occasions positive dissatisfaction, the refusal to resolve a dissonance in modern music does not dissatisfy us, but irritates or stimulates. Thus, “energy” takes the place of style.

3 Suspense is the least complex kind of anticipation, as surprise is the least complex kind of fulfilment.
which, because they are natural, can bear repetition without loss. It is for this reason that music, like folk tales, is most capable of lulling us to sleep. A lullaby is a melody which comes quickly to rest, where the obstacles are easily overcome — and this is precisely the parallel to those waking dreams of struggle and conquest which (especially during childhood) we permit ourselves when falling asleep or when trying to induce sleep. Folk tales are just such waking dreams. Thus it is right that art should be called a “waking dream.” The only difficulty with this definition (indicated by Charles Baudouin in his Psychoanalysis and Aesthetics, a very valuable study of Verhaeren) is that to-day we understand it to mean art as a waking dream for the artist. Modern criticism, and psychoanalysis in particular, is too prone to define the essence of art in terms of the artist’s weaknesses. It is, rather, the audience which dreams, while the artist oversees the conditions which determine this dream. He is the manipulator of blood, brains, heart, and bowels which, while we sleep, dictate the mould of our desires. This is, of course, the real meaning of artistic felicity — an exaltation at the correctness of the procedure, so that we enjoy the steady march of doom in a Racinean tragedy with exactly the same equipment as that which produces our delight with Benedick’s “Peace! I’ll stop your mouth. (Kisses her)” which terminates the imbroglio of Much Ado About Nothing.

The methods of maintaining interest which are most natural to the psychology of information (as it is applied to works of pure art) are surprise and suspense. The method most natural to the psychology of form is eloquence. For this reason the great ages of Aeschylus, Shakespeare, and Racine, dealing as they did with material which was more or less a matter of common knowledge so that the broad outlines of the plot were known in advance (while it is the broad outlines which are usually exploited to secure surprise and suspense) developed formal excellence, or eloquence, as the basis of appeal in their work.

Not that there is any difference in kind between the classic method and the method of the cheapest contemporary melodrama. The drama, more than any other form, must never lose sight of its audience: here the failure to satisfy the proper requirements is most disastrous. And since certain contemporary work is successful, it follows that rudimentary laws of composition are being
complied with. The distinction is one of intensity rather than of kind. The contemporary audience hears the lines of a play or novel with the same equipment as it brings to reading the lines of its daily paper. It is content to have facts placed before it in some more or less adequate sequence. Eloquence is the minimizing of this interest in fact, per se, so that the "more or less adequate sequence" of their presentation must be relied on to a much greater extent. Thus, those elements of surprise and suspense are subtilized, carried down into the writing of a line or a sentence, until in all its smallest details the work bristles with disclosures, contrasts, restatements with a difference, ellipses, images, aphorism, volume, sound-values, in short all that complex wealth of minutiae which in their line-for-line aspect we call style and in their broader outlines we call form.

As a striking instance of a modern play with potentialities in which the intensity of eloquence is missing, I might cite a recent success, Capek's R. U. R. Here, in a melodrama which was often astonishing in the rightness of its technical procedure, when the author was finished he had written nothing but the scenario for a play by Shakespeare. It was a play in which the author produced time and again the opportunity, the demand, for eloquence, only to move on. (At other times, the most successful moments, he utilized the modern discovery of silence, writing moments wherein words could not possibly serve but to detract from the effect: this we might call the "flowering" of information.) The Adam and Eve scene of the last act, a "commission" which the Shakespeare of the comedies would have loved to fill, was in the verbal barrenness of Capek's play something shameless to the point of blushing. The Robot, turned human, prompted by the dawn of love to see his first sunrise, or hear the first bird-call, and forced merely to say "Oh, see the sunrise," or "Hear the pretty birds"—here one could do nothing but wring his hands at the absence of that aesthetic mould which produced the overslung "speeches" of Romeo and Juliet.

Suspense is the concern over the possible outcome of some specific detail of plot rather than for general qualities. Thus, "Will A marry B or C?" is suspense. In Macbeth, the turn from the murder scene to the porter scene is a much less literal channel of development. Here the presence of one quality calls forth the
demand for another, rather than one tangible incident of plot awakening an interest in some other possible tangible incident of plot. To illustrate more fully, if an author managed over a certain number of his pages to produce a feeling of sultriness, or oppression, in the reader, this would unconsciously awaken in the reader the desire for a cold, fresh northwind—and thus some aspect of a northwind would be effective if called forth by some aspect of stuffiness. A good example of this is to be found in a contemporary poem, T. S. Eliot’s The Waste Land, where the vulgar, oppressively trivial conversation in the public house calls forth in the poet a memory of a line from Shakespeare. These slobs in a public house, after a desolately low-visioned conversation, are now forced by closing time to leave the saloon. They say good-night. And suddenly the poet, feeling his release, drops into another good-night, a good-night with désinvolture, a good-night out of what was, within the conditions of the poem at least, a graceful and irrecoverable past.

“Well that Sunday Albert was home, they had a hot gammon, And they asked me in to dinner, to get the beauty of it hot” —[at this point the bartender interrupts: it is closing time] “Goonight Bill. Goonight Lou. Goonight May. Goonight. Ta ta. Goonight. Goonight. Good-night, ladies, good-night, sweet ladies, good-night, good-night.”

There is much more to be said on these lines, which I have shortened somewhat in quotation to make my issue clearer. But I simply wish to point out here that this transition is a bold juxtaposition of one quality created by another, an association in ideas which, if not logical, is nevertheless emotionally natural. In the case of Macbeth, similarly, it would be absurd to say that the audience, after the murder scene, wants a porter scene. But the audience does want the quality which this porter particularizes. The dramatist might, conceivably, have introduced some entirely different character or event in this place, provided only that the event produced the same quality of relationship and contrast (grotesque seriousness followed by grotesque buffoonery). . . . One of the most beautiful and satisfactory “forms” of this sort is to be found in Baudelaire’s Femmes Damnées, where the poet, after describing
the business of a Lesbian seduction, turns to the full oratory of his apostrophe:

"Descendez, descendez, lamentables victimes,
Descendez le chemin de l'enfer éternel . . ."

while the stylistic efficacy of this transition contains a richness which transcends all moral (or unmoral) sophistication: the efficacy of appropriateness, of exactly the natural curve in treatment. Here is morality even for the godless, since it is a morality of art, being justified, if for no other reason, by its paralleling of that stale-ness, that disquieting loss of purpose, which must have followed the procedure of the two characters, the femmes damnées themselves, a remorse which, perhaps only physical in its origin, nevertheless become psychic.¹

But to return, we have made three terms synonymous: form, psychology, and eloquence. And eloquence thereby becomes the essence of art, while pity, tragedy, sweetness, humour, in short all the emotions which we experience in life proper, as non-artists, are simply the material on which eloquence may feed. The arousing of pity, for instance, is not the central purpose of art, although it may be an adjunct of artistic effectiveness. One can feel pity much more keenly at the sight of some actual misfortune—and it would be a great mistake to see art merely as a weak representation of some actual experience.² That artists to-day are content to write under such an aesthetic accounts in part for the inferior position which art holds in the community. Art, at least in the great periods when it has flowered, was the conversion, or transcendance, of emotion into eloquence, and was thus a factor added

¹ As another aspect of the same subject, I could cite many examples from the fairy tale. Consider, for instance, when the hero is to spend the night in a bewitched castle. Obviously, as darkness descends, weird adventures must befall him. His bed rides him through the castle; two halves of a man challenge him to a game of nine-pins played with thigh bones and skulls. Or entirely different incidents may serve instead of these. The quality comes first, the particularization follows.

² Could not the Greek public's resistance to Euripides be accounted for in the fact that he, of the three great writers of Greek tragedy, betrayed his art, was guilty of aesthetic impiety, in that he paid more attention to the arousing of emotion per se than to the sublimation of emotion into eloquence?
but in a sorry manner, with less intensity, until this aspect is
appetites.

and say that we turn to art to indulge our humanitarianism in a
end of art, and is thus its essence. Even the poorest art is eloquent,
a framework of more stable qualities. Eloquence is simply the
obscured by others fattening upon its leanness. Eloquence is not
showiness; it is, rather, the result of that desire in the artist to make
a work perfect by adapting it in every minute detail to the racial
appetites.

The distinction between the psychology of information and the
psychology of form involves a definition of aesthetic truth. It is
here precisely, to combat the deflection which the strength of
science has caused to our tastes, that we must examine the essential
breach between scientific and artistic truth. Truth in art is not the
discovery of facts, not an addition to human knowledge in the
scientific sense of the word. It is, rather, the exercise of human

One of the most striking examples of the encroachment of scientific truth
into art is the doctrine of "truth by distortion," whereby one aspect of an
object is suppressed the better to emphasize some other aspect; this is,
obviously, an attempt to indicate by art some fact of knowledge, to make
some implicit aspect of an object as explicit as one can by means of the
comparatively dumb method of art (dumb, that is, as compared to the
perfect ease with which science can indicate its discoveries). Yet science
has already made discoveries in the realm of this "factual truth," this
"truth by distortion" which must put to shame any artist who relies on
such matter for his effects. Consider, for instance, the motion-picture of
a man vaulting. By photographing this process very rapidly, and running
the reel very slowly, one has upon the screen the most striking set of
factual truths to aid in our understanding of an athlete vaulting. Here,
at our leisure, we can observe the contortions of four legs, a head, and
a butt. This squirming thing we saw upon the screen showed us an
infinity of factual truths anent the balances of an athlete vaulting. We
can, from this, observe the marvellous system of balancing which the
body provides for itself in the adjustments of moving. Yet, so far as
propriety, the formulation of symbols which rigidify our sense of poise and rhythm. Artistic truth is the externalization of taste. I sometimes wonder, for instance, whether the "artificial" speech of John Lyly might perhaps be "truer" than the revelations of Dostoevsky. Certainly at its best, in its feeling for a statement which returns upon itself, which attempts the systole to a diastole, it could be much truer than Dostoevsky. And if it is not, it fails not through a mistake of Lyly's aesthetic, but because Lyly was a man poor in character whereas Dostoevsky was rich and complex. When Swift, making the women of Brobdingnag enormous, deduces from this discrepancy between their size and Gulliver's that Gulliver could sit astride their nipples, he has written something which is aesthetically true, which is, if I may be pardoned, profoundly "proper," as correct in its Euclidean deduction as any corollary in geometry. Given the companions of Ulysses in the cave of Polyphemus, it is true that they would escape clinging to the bellies of the herd let out to pasture. St Ambrose, detailing the habits of God's creatures, and drawing from them moral maxims for the good of mankind, St Ambrose in his limping natural history rich in scientific inaccuracies that are at the very heart of emotional rightness, St Ambrose writes "Of night-birds, especially of the nightingale which hatches her eggs by song; of the owl, the bat, and the cock at cock-crow; in what wise these may apply to the guidance of our habits," and in the sheer rightness of that programme there is the truth of art. In introducing this talk of night-birds, after many pages devoted to other of God's creatures, he says,

"What now! While we have been talking, you will notice how the aesthetic truth is concerned, this on the screen was not an athlete, but a squirming thing, a horror, displaying every fact of vaulting except the exhilaration of the act itself.

2 The procedure of science involves the elimination of taste, employing as a substitute the corrective norm of the pragmatic test, the empirical experiment, which is entirely intellectual. Those who oppose the "intellectualism" of critics like Matthew Arnold are involved in a hilarious blunder, for Arnold's entire approach to the appreciation of art is through delicacies of taste intensified to the extent almost of squeamishness.

3 As for instance, the "conceit" of Endymion's awakening, when he forgets his own name, yet recalls that of his beloved.
the birds of night have already started fluttering about you, and, in this same fact of warning us to leave off with our discussion, suggest thereby a further topic”—

and this seems to me to contain the best wisdom of which the human frame is capable, an address, a discourse, which can make our material life seem blatant almost to the point of despair. And when the cock crows, and the thief abandons his traps, and the sun lights up, and we are in every way called back to God by the well-meaning admonition of this bird, here the very blindnesses of religion become the deepest truths of art.
